R Functions for Exam 2

Exam 2 will not test basic knowledge of the R language like Exam 1 did. However, there are several R functions that you should know. For each function listed below, you need to know what the inputs to the function are, what it computes, and the main situations in which it is used.

- `runif()`
- `rnorm()`
- `round()`
- `for()`
- `pbinom()`
- `qbinom()`
- `pt()`
- `qt()`
- `t.test()` – for one sample and for two
- `abs()`
