Name: $\qquad$ TA: $\qquad$ Lab Day and Time: $\qquad$
Please fill out all three lines above. Otherwise we can't easily record your scores.
Your 3-year-old niece has a vocabulary of 500 words, which gives her a z-score of +1 for kids her age. Your neighbor's kid has a vocabulary of 200 words and a z-score of -2 .

1. What's the standard deviation?
2. What's the mean?

A z-table gives the probability of a z-score greater than each listed value, in a normal distribution. People used these before computers, and there's one in the back of your textbook. Here's a z-table:

| z | $\mathrm{p}(\mathrm{Z} \geq \mathrm{z})$ | z | $\mathrm{p}(\mathrm{Z} \geq \mathrm{z})$ | z | $\mathrm{p}(\mathrm{Z} \geq \mathrm{z})$ | z | $\mathrm{p}(\mathrm{Z} \geq \mathrm{z})$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | $?$ | .5 | .309 | 1.0 | .159 | 1.5 | .067 |
| .1 | .460 | .6 | .274 | 1.1 | .136 | 1.6 | .055 |
| .2 | .421 | .7 | .242 | 1.2 | .115 | 1.7 | .045 |
| .3 | .382 | .8 | .212 | 1.3 | .097 | 1.8 | .036 |
| .4 | .345 | .9 | .184 | 1.4 | .081 | 1.9 | .029 |

3. What value belongs in the question mark?
4. What's the probability of a z-score greater than -1 ?
5. What's the probability of a z-score between .5 and 1 ?
6. When you get off an international flight to Singapore, they take your temperature and if it's over $39^{\circ} \mathrm{C}$ they quarantine you to keep diseases out of the country. Of course even healthy people have natural variability in temperature, following a normal distribution with mean $37^{\circ}$ and standard deviation $2.5^{\circ}$. What percentage of healthy people are mistakenly quarantined?

A lottery ticket can pay $\$ 5$ or $\$ 100$, or it can pay nothing. The probability of winning $\$ 5$ is 1 in 10 . The probability of winning \$100 is 1 in 100.
7. What is the probability of a ticket paying nothing?
8. What is the expected value of how much a ticket will pay?
9. If the state sells a million tickets at $\$ 1$ each, about how much profit will it make?
10. Calculate the variance of $\{11,18,21,14,9,15\}$, treated as a population.
11. Calculate the variance of the same numbers, treated as a sample. Try to use a shortcut based on your previous answer.
12. A population has a variance of 8. Imagine you collect a large number of independent samples, each with 30 subjects, and compute the sample variance of each sample. What would you expect the average of your sample variances to be?
